

## **ACE WINDOWS NE ASBESTOS**

The hazard associated with working with Asbestos Containing Material (ACM) is that when disturbed, asbestos fibres are released. Asbestos Fibres are known to be the cause of asbestosis (asbestos induced lung fibrosis), mesothelioma (cancer of the pleura or lining of the lung) and bronchogenic lung cancer.

It is therefore essential that all legislation and procedures are complied with fully in order to protect everyone.

We believe are our buildings at Ace Windows NE to be free of asbestos containing materials.

However our Window Fitters undertake work at domestic and commercial properties.

Where possible we obtain information in advance, of the locations of ACMs and pass this information to these staff with relevant instruction on how to avoid any disturbance.

If a Window Fitter If in doubt or suspected ACMs may be disturbed they are must stop work immediately and consult Management to check the location of ACMs. Our employees are not permitted to undertake any work which may damage or disturb asbestos.

Ace Windows NE are committed to Health and Safety and ensuring staff stay safe. Therefore we as a company will always seek professional expertise on Asbestos to ensure our employees are safe.
